

Port Security

Port Security

Concepts

- Who can access a switch port (by Mac) ?
- How many PCs can connect to one port (How Many Macs)?
- If something happens that is not allowed, what should the switch do?

Port Security

Configuration

1.Port security is only allowed on the access ports , so make sure the port is an access port

```
Switch(config)# interface fastethernet 0/1
Switch(config-if)# switchport mode access
```

2.Enable port security

```
Switch(config-if)# switchport port-security
```

Port Security

Configuration

3.Configure allowed mac addresses

Switch(config-if)#switchport port-security mac-address *H.H.H*

Example

Switch(config-if)#switchport port-security mac-address *e23f.23e2.ef3e*

Monitoring

Switch# show port-security

Port Security

Configuration

3.Configure allowed mac addresses

Switch(config-if)# switchport port-security mac-address sticky

Interface range configuration

Switch(config)# interface range fastethernet *0/1-8* , fastethernet *0/24*

Port Security

Configuration

4.Configure maximum MAC addresses

(Max=1 by default)

Switch(config-if)#switchport port-security maximum *maximum*

Configuration

5.Configure Security Violation Action

Switch(config-if)# switchport port-security violation [Protect | Restrict | Shutdown]

Option on the switchport port-security violation Command	Protect	Restrict	Shutdown*
Discards offending traffic	Yes	Yes	Yes
Sends log and SNMP messages	No	Yes	Yes
Disables the interface, discarding all traffic	No	No	Yes
